

**Empowering Education
Through Infrastructure
Upgrades**

Key Challenges in Government Schools

A **lack of basic school infrastructure** including **clean toilets, electricity** and **safe drinking water**

Overcrowded and dilapidated classrooms with **insufficient furniture** and **proper lighting**

Poor school performance due to an environment that is **not conducive to learning**

Why is it crucial to address infrastructure challenges in government schools?

Many government schools in Karnataka lack safe infrastructure, clean water, and proper sanitation, making it difficult for students to learn. Without these basics, attendance drops, and opportunities shrink.

Embassy Group partners with the Department of Education to bridge this gap—ensuring schools are structurally secure, equipped with toilets, clean water, and sustainable solutions like rainwater harvesting and solar panels.

Beyond upgrades, ongoing maintenance keeps schools clean and functional year-round. Investing in better infrastructure isn't just about buildings—it's about giving every child a fair chance at a brighter future.

Embassy's Commitment to Better Education Through Infrastructure

325

155 New Classrooms and 170 new Toilets built

175

School upgradation projects undertaken

26

Schools are maintained daily
